

Claire is a Microtarget Fabricator in the Target Fabrication Group at the Central Laser Facility (CLF). Working closely with scientists and engineers, she makes tiny, very specific targets for powerful laser experiments. No two targets are the same, so Claire uses practical skills, **creativity** and **logical** thinking every day to find the best solution. Claire enjoys the challenge of solving complex problems and is **resilient** when things do not go to plan. She enjoyed both art and science at school and believes you do not have to fit into one or the other to work in science and engineering.

Logical
