

STEM PERSON OF THE WEEK

Tyler Ellis

HPC Systems Administrator

Tyler works at STFC's Daresbury Laboratory as a High Performance Computing (HPC) Systems Administrator, helping to look after the powerful supercomputers and technology that researchers use every day. His job involves using a **logical** approach to solve technical problems, and creating automated systems that make managing large numbers of computers more efficient. He is **passionate** about computers and technology, and has been fascinated by them since he was young, first developing his interest through playing video games and experimenting with different software. He is **open-minded** and keen to explore new technologies, listen to different ideas and find better ways of doing things. Tyler enjoys the variety and challenges his role brings, and is constantly learning new skills to help support world-leading scientific research.

Passionate **Logical** **Open-minded**
